

Dear One Stop Consult Ltd

Ranjeet Shahi, 265 Queens Road, Nuneaton

We thank you for your enquiry and have the pleasure of submitting our quotation for the work as outlined below.

We offer our fee proposal to produce a structural report containing structural drawings sufficient to illustrate the design to a competent and experienced builder. The report will also contain supporting structural calculations which will verify the selection of materials we have specified to the relevant British standards or Euro-codes. We will provide additional calculations if required to the satisfaction of the building inspector allocated to your project within the parameters of the original design brief.

Generally, our prices are worked out based on the number of calculations required to complete the report with different rates applied to those calculations based on the time required to complete them.

Please note the number of structural items listed may not reflect the number of items required but only the number of calculations we have allocated time, this is because some elements may be similar or comparable and therefore are not charged for twice.

If you need further clarification or if anything is unclear, please feel free to get in touch.

Should the quotation be of interest then we look forward to hearing from you in due course.

Yours sincerely

Jason Pritchard

Director Structural Calculations Ltd.
